

## NCR DAYS 2019

Preliminary program

Version: October 31

### Session themes

#### 1. Discharge extremes

This session will present the recent innovations in the management of flood risk and water shortage. We invite abstracts regarding (1) the failure, stability or development of either hard (dikes/dams) or soft (Room for the River / Building with Nature) flood protection measures, and (2) solutions for low flow challenges for ecology and navigation.

#### 2. River management

Governance links law, policy and management from a multitude of stakeholders to the biophysical system. The interplay of these factors determines decisions on and management of our rivers. We invite abstracts on this topic linking different disciplines and different time scales. We also invite abstracts for (sustainable pathways) of the longer term (> 50 years) management of rivers, and deltas.

#### 3. Morphology and ecology

This session covers topics on ecology, (bio) morphology of river channels and floodplains, water quality, and the transport, erosion or deposition of sediment.

#### 4. Long term river behaviour

In this session examines the long-term (> 50 years) behaviour of rivers and deltas. We also invite abstracts regarding processes of sea-level rise, changing ecology, and the subsurface/land subsidence.
